# BePrometheus: A single spark can ignite a vast fire

Since Prometheus stole the fire for mankind, a great deal of time has passed. These sparks, once symbols of unity, light and resilience, have scattered to every corner of the world with the passage of time. Now, as the sacred flame on the altar dims and threatens to extinguish completely, it's time to call upon you all in the Metis community. Become new Prometheuses; reignite this holy fire; spread its light anew and rekindle hope for our sacred platform!

Make Metis Great Again!
"Be Prometheus" is a social experimental GameFi project on the Metis Blockchain. Just as a single spark can ignite a vast fire, it aims to empower every user to become a believer and a proactive node in the social network. BePrometheus is aiming to reinvigorate the participation of Metis users in ecosystem development through an innovative social-fi model, thereby revitalizing the Metis ecosystem. Inspired by ancient Greek mythology, BePrometheus has a simple yet innovative economic model.

Understand the Basics

To facilitate your navigation of BePrometheus, this document will provide a concise description of the terms utilized within the platform:

- **MMGA:** Make Metis Great Again!
- **Prometheus NFT:** The Prometheus NFT represents a digital asset within the BePrometheus universe, serving as a foundational component of the ecosystem. Users can become a Believer by burning a Prometheus NFT, thereby enabling their full participation in the GameFi mechanics. Future NFTs will be minted by utilizing

$ASPARK for the purpose of preaching. Each Prometheus NFT contains the address information of its preacher, which can be leveraged to grant new Believer qualifications.

- **$ASPARK:** The $ASPARK token corresponds to the AllSpark token, serving as the sole non-fungible token within the BePrometheus ecosystem. It is generated through the prayers of Believers and embodies the community's commitment to the initiative of "Make Metis Great Again" (MMGA). The $ASPARK token is created when Believers pray to Prometheus.

- **Believer:** A Believer is any user who becomes a follower by sacrificing (burning) their Prometheus NFT, thereby establishing a connection with the NFT creator, known as the Preacher. Believers have the ability to engage in both Prayer and Preaching, signifying their commitment to the "Make Metis Great Again" (MMGA) initiative.

- **Pray:** To demonstrate support for the "Make Metis Great Again" (MMGA) initiative, Believers can engage in Prayer, which allows them to obtain a specific amount of $ASPARK by spending a small amount of $METIS. Each Believer is permitted to Pray up to 10 times per day.

- **Preach:** Believers can burn $ASPARK tokens to forge new Prometheus NFTs, thereby expressing their faith in the "Make Metis Great Again" (MMGA) initiative. The creator of each NFT will assume the role of a Preacher, establishing a connection with new users who burn the NFT to become new Believers.

- **Sacrifice:** The user burns their Prometheus NFT to become a Believer, thereby establishing a connection with the Preacher.

- **Flare:** Users can contribute liquidity by staking $ASPARK / $METIS LP, earning dual rewards in both $ASPARK and $METIS.

To gain a comprehensive understanding of the logic behind BePrometheus, users should familiarize themselves with the following four core sections on the website, which form the foundation of the BePrometheus social experiment:

- **Hall of the Gods:** The Hall of the Gods serves as a marketplace for Prometheus NFTs, where users can mint, buy, and sell NFTs. It acts as a trading platform for those who have not yet acquired an NFT and wish to engage in prayer. In this hall, you can connect with

Prometheus and use $ASPARK to mint your own Prometheus NFT. Each minting action records your address information on the contract as a Preacher.

- **Altar of Prayer:** The Altar of Prayer is designated for Believers to pray, allowing users to offer their prayers to Prometheus and generate $ASPARK. Ignite hope and earn daily blessings through your prayers! As a Believer, you can pray to Prometheus using $METIS tokens to engage in fire interactions. Each prayer rewards you with a fixed amount of $ASPARK, with corresponding incentives also added to LP staking rewards.

- **Abyss of Sacrifice:** In the Abyss of Sacrifice, you have the option to burn your Prometheus NFT to become a Believer, unlocking daily prayer interactions to earn $ASPARK. As a Believer, you can also use $ASPARK to mint new Prometheus NFTs, spreading the flame to others and unlocking additional reward shares.

- **Apex of Fire:** The Apex of Fire supports the entire $ASPARK ecosystem. Here, users can contribute their flames by participating in $ASPARK/$METIS LP staking to earn rewards in both $ASPARK and $METIS. Each time a Believer engages in a daily prayer interaction, the reward pool receives an equivalent amount of $ASPARK, ensuring its continuous growth.

The above sections outline the fundamental concepts and functions of BePrometheus. The following section will delve into the economic model of BePrometheus, detailing its operational logic to illustrate why it represents an intriguing social experiment.

The Economics Behind BePrometheus

An Easy Guide for New Users

To facilitate understanding, this section outlines the entire economic model from the perspective of a new user. The model encompasses three distinct roles—similar to producers, consumers, and decomposers in nature—namely: Believer (the entity that produces $ASPARK), Preacher (the entity that consumes $ASPARK), and Contributor (the entity that provides liquidity for $ASPARK). The core objective of this model is to attract more users to engage in this social experiment through the cyclical interaction of these three roles, ultimately working together to achieve the goal of "Make Metis Great Again" (MMGA).

A new user must first acquire a Prometheus NFT to engage with the BePrometheus narrative. This NFT can be obtained either through gifting or by purchasing it with $METIS in the Hall of the Gods. This acquisition introduces positive externalities into the BePrometheus economic model. Subsequently, users can burn the NFT to become a Believer and generate $ASPARK by praying at the Altar of Prayer, thereby assuming the role of producers within the BePrometheus system.

After generating $ASPARK, users have three primary options: they can sell $ASPARK on the market, use $ASPARK in the Abyss of Sacrifice to mint a new Prometheus NFT, or become a liquidity provider by staking $ASPARK/$METIS LPs in the Apex of Fire. These options represent three distinct strategic paths, and users will make choices based on their individual risk preferences and other factors. Regardless of their choices, each user plays a crucial role within the BePrometheus ecosystem.

Each time a user prays, they receive 500 $ASPARK tokens and simultaneously mint an additional 500 $ASPARK tokens. These newly minted tokens are directed into the Apex of Fire contract and will be distributed to liquidity providers over 180 days as rewards for their contributions to the ecosystem. Liquidity providers may choose whether or not to become Believers. If they are Believers, their Preacher will receive 10% of their staking rewards; if they are not, this 10% will be allocated to the development team.

When users opt to burn $ASPARK tokens to mint NFTs, they automatically assume the role of Preachers. Preachers can earn 10% of the staking rewards from Apex of Fire generated by Believers who burn their preached NFTs. However, if a Believer who burns their NFT does not become a liquidity provider, the Preacher will not receive any benefits. This dynamic creates an engaging scenario where user choices significantly impact both their individual interests and the overall functionality of the system, while also fostering social engagement and growth.

It is important to note that the $ASPARK required to mint Prometheus NFTs is continuously increasing. For instance, minting the #100,001st Prometheus NFT will require 190,000

$ASPARK—equivalent to a single user praying continuously for 38 days. Throughout this process, there is a cap of 100 billion $ASPARK tokens, resulting in a state of constant deflation, with the rate of deflation dependent on market acceptance and participation in this social experiment.

Therefore, within the entire BePrometheus system, all participants (regardless of your intentions and choices made on the game path) share a common goal - to involve more people in this social experiment. This is precisely why this experiment was named BePrometheus. Theoretically, this experiment will ignite the entire Metis ecosystem like a spark. Make Metis Great Again!

A Detailed Description of the Economic Model

This section provides a comprehensive numerical overview of BePrometheus to enhance users' understanding of the entire system:

1. The total supply of $ASPARK is capped at 100,000,000,000, with no upper limit on the total number of NFTs.
2. The first batch consists of 10,000 NFTs, which will be sold directly in the initial stage. These NFTs will be available for purchase on the platform using $METIS , organized into a whitelist round and a public sale round.
3. Starting from the 10,001st NFT, the amount of $ASPARK required for minting is calculated as (serial number × 2) - 10,000, with higher serial numbers necessitating a linear increase in $ASPARK.
4. Each prayer generates 1,000 $ASPARK, a fixed amount where 500 $ASPARK is allocated to the Believer and the remaining 500 $ASPARK is allocated to the Apex of Fire LP rewards contract.
5. Believers can pray up to 10 times daily, allowing them to earn a maximum of 5,000 $ASPARK and contribute an equivalent amount to the reward contract every day.
6. The Apex of Fire settles daily, distributing the newly acquired $ASPARK tokens as rewards to liquidity providers of $ASPARK / $METIS.、

Conclusion

In conclusion, the BePrometheus initiative represents a transformative economic model that is thoughtfully designed to enhance community engagement and stimulate growth within the Metis ecosystem. By incentivizing active participation through the distinct roles of Believer, Preacher, and Contributor, BePrometheus aims to rekindle the collective spirit of the Metis community, fostering a sense of belonging and shared purpose among its members.

The roles within the BePrometheus framework not only encourage user involvement but also create a vibrant ecosystem where each participant contributes to the broader mission. As Believers embrace their commitment, Preachers amplify the message, and Contributors drive innovation, BePrometheus cultivates a dynamic environment that thrives on collaboration and creativity.

Through the innovative integration of social dynamics and decentralized finance, BePrometheus establishes a robust pathway for achieving the shared vision: "Make Metis Great Again." This initiative not only seeks to elevate the Metis platform but also aspires to set a precedent for community-driven projects in the blockchain space.
